

MODEL C2C

CLASS: Hot Condensate Return

CONSTRUCTION: 304SS Chamber, Carbon Steel Base

CAPACITY: 0-26 gpm [12,000 lbs/hr]

DISCHARGE PRESSURE: 0-100 psi [6.9 Bar]

MAX SOLID: 2" [5 cm]

CONFIGURATION OPTIONS

- ALL-PNEUMATIC CONTROL (XP/explosionproof and remote locations)
- GRAVITY FILLED
- HIGH TEMPERATURE (212F/100C)
- INCLUDES BRASS SIGHT GLASS

PITBULI

27.2 [69]

7.1 [18]

PITBULL

KEY FEATURES

₿∎

The model C2C is a condensate return pump designed for direct connection to a flash tank/receiver and may also be used for submersed high temperature sump applications.

G 3.1

There are no floats, over-center devices, valve mechanisms, springs, switches or probes inside the pump to service. Instead the C2C is operated remotely and automatically by the patented, all-pneumatic AP200C control panel.

Two heavy-duty, 316SS swing check valve flappers are the only wetted, moving components.

In addition, the C2C has a 2" diameter solids capacity so it is not limited to clean fluids and will handle all sorts of debris and solids.

QUICK SPECS

- Weight: 84 lbs [38 kg]
- Stroke Volume: 3.6 gal [13.6 l]
- Operating Level: 'Gravity' 23" [58 cm] (see reverse side for explanation)
- Panel Required: AP212C

See reverse side for Specification Details, Flow Curve and Air Consumption

Part# C2C/_/AP212C2

E = epdm (standard on C2C)

When pumping hot condensate the C2C pump requires that the condensate flash to atmospheric pressure before entering the pump. Shown is a typical flash tank with a large vent to release flash and enough height for condensate to drain into the pump by gravity.

Typical Installation with Flash Tank Receiver

Gravity operation requires an operating level equal to the top of the pump, approximately 23" above grade (surface the pump is on). The above sketch shows a liquid level high enough to cycle the pump.

Panel Requirements: Compressed air or dry gas, unlubricated, recommended 80 psi delivered through 3/4" pipe or equal.

V = viton

SEAT MATERIAL

T = teflon

K = kynar

Example:

PANEL

C2C/E/AP212C = 2" 304SS/steel condensate pump with epdm seats, AP212C control panel.

Valve seat selection:

- Viton excellent resistance to oxidizers and solvents. Medium strength, used up to 250°F.
- Teflon excellent chemical resistance to acids, bases and solvents. Lower cycle life, non-elastomeric, used up to 300°F.
- EPDM good heat and acid/base resistance but poor hydrocarbon resistance, used up to 300°F.
- PVDF (kynar) excellent chemical resistance, toughness and • resistance to cold flow (thermoplastic). Good cycle life and can be used up to 250°F.
